                                                                       Original source text: Mouse lens, cDNA to mRNA.

The crystallins contribute 90% of the soluble lens protein and are highly conserved during evolution. There are four immunologically separate classes of crystallins called alpha - beta-, gamma-, and delta-crystallin. The mRNA of the alpha-A-crystallin from mouse, like that from cows and rats, is nearly three times the size required to code for the polypeptide. Nucleotides 1-490 of the mouse alpha-A-crystallin mRNA predict a protein sequence identical to amino acids 10-173 of rat alpha-A-crystallin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               301 TCCCGTGAATTTCACCGTCGCTACCGTCTGCCTTCCAATGTGGACCAGTCCGCCCTCTCC 360

//note="alpha A (insert)-crystallin is similar to alpha A-crystallin, the predominant protein of the ocular lens. These two proteins are identical in sequence except for the presence of a 23 amino acid peptide in alpha (finsert)-crystallin located between the 63rd and the 64th residue of alpha A-crystallin, alpha A (insert)-crystallin represents about 10-20% of total alpha crystallin in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /trānslation="MDVTIQHPWFKRALGPFYPSRLFDQFFGEGLFEYDLLPFLSSTI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bhat, S.P., Horwitz, J., Srinivasan, A. and Ding, L. alphaB-crystallin exists as an independent protein in the heart and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (25-SEP-1991) S.P. Bhat, Room B-118, Jules Stein Eye Institute, UCLA School of Medicine, 100 Stein Plaza, Los Angeles, California 90024-7008, USA
A multimeric ubiquitous extracellular crystallin of the vertebrate lens, related to small heat shock proteins, phosphorylated.
Presumed function: structural protein of the lens in association
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  297
